Typically these drugs are taken, whether by legitimate prescription or when they're abused, as oral tablets. Some people, however, abuse them in . Key findings: Intravenous use of oxycodone was examined among people who regularly inject drugs (PWID) interviewed as part of the Illicit Drug Reporting System .

Put the pills in a container (medicine bottle) with about ½ of a (insulin) syringe of HOT water per pill. IF YOU USE TOO MUCH WATER YOU *WILL* GET SOMETHING CALLED. The oxycodone/water solution in the syringe is noticeably. Other Drugs > Archive - OD > Safer Oxycontin Injection. are a lot of fools out there that figure the best way is. Messages. 1,734. Aug 14, 2013. #3. You would need a 3ml rig. You would actually get less from shooting 210mgs **oxycodone** than eating your regular dose of 300mg oxy, due to bioavailability. There is no gain whatsoever. Find stronger opiates to shoot or don't bother. There's no point in what you propose to do. Draw up about 20 units of water & add it to the crushed **pill** in the spoon. Mix it up until it's totally dissolved. Get a small ball of cotton from the end of a q-tip, & drop it into the spoon. Put the needle against the piece of cotton & draw up the liquid. How to melt down new **oxycontin**. How to melt down and **inject** Op Can. **Injecting** - HOW TO: 80)? **injecting** any type of. mgs. and now op and I cant get them to break down so Can you **inject** the new **Oxycontin**. Fold up a glossy magazine cover (think playboy center-fold) or a crisp new bill. **OxyContin® Oxycodone HCl Controlled-Release: 10 mg, 20 mg, 40.** Also, the extended-release version of **oxycodone** is prescribed now in a tamper-proof form. When someone attempts to **inject** current versions of extended-release **oxycodone**, it turns into a gel when they try to crush it. That makes extended-release **oxycodone** impossible to snort, but it doesn't always derail people who want to **inject** it. The just released tamper-proof Oxycontin **pill** makes it more difficult for drug addicts to crush, melt or **inject** the **pill**. Oxycontin is used for swallowing, and it releases **oxycodone** in incremented doses for a period of 12 hours. When snorted or injected, opiate abusers feel a quick euphoria that can last four hours. Put the **pills** in a container (medicine bottle) with about ½ of a (insulin) syringe of HOT water per **pill**. IF YOU USE TOO MUCH WATER YOU *WILL* GET SOMETHING CALLED. The **oxycodone/water** solution in the syringe is noticeably. Other **Drugs > Archive - OD > Safer Oxycontin Injection.** are a lot of fools out there that figure the best way is. starting off with those (assuming they are plain 5 **mg oxycodone pill** no tylenol) is not going to be the easiest ever because there is going to be a lot of powder. id suggest starting with 30 **mg** and seeing what that does for you, best to start small and work up and with some tolerance to **oxycodone** 30 would be manageable. -**Oxycodone** oral solution is available in 2 concentrations (5 **mg/mL** and **20 mg/mL**); to avoid dosing errors, be sure to verify dose in both **mg** and **mL** when prescribing and dispensing-The calibrated oral measuring cup (5 **mg/mL**) or oral syringe (**20 mg/mL**) should be provided to the patient and used for measuring **Immediate-release** tablets:.
